HITACHI ROBOTIC INTERFACING SYSTEM

Features and Benefits of HRIS

Embrace Automation

Artificial Intelligence and Robotics are transforming local industries and daily operations.

Introducing HRIS

Designed to interface directly with your service robots

Enables smooth vertical mobility in smart environments

Boosts operational efficiency and supports automation goals

AMR Integration for autonomous lift travelling

Enables AMR systems autonomous calling of lifts to move between floors. Eliminate manual intervention.

Real time lift status

Communicates real time lift status such as lift position, door status (open/close), lift travelling direction, In service or fire service to AMR.

Input control from AMR

Allows control of lift door open and close function to aid AMR moving in and out of lift.

Standardize protocols

Support standardized communication protocols with API for seamless integration

Scalability and Flexibility

Ability to scale with more AMR fleets and flexible for integration with various AMR.

Option for hall call disable function

Offers option to integrate hall call disable function for non co-sharing AMR.

Seamless Integration

Businesses today demand connectivity and mobility- especially in automated environments.

Lift your business into the future. Empower your service robots with mobility

SINGAPORE STANDARD SS 713:2025

With safe operation in mind, HRIS is compliance to the local requirement and guidelines for Data exchange between robots and lifts.
